

QUICK REFERENCE STAIN REMOVAL METHODS

Use each of the cleaning agents on the stained area in the order indicated until the stain is removed. Apply small amounts of cleaning solution with a clean, white, absorbent towel. Blot frequently and continue to apply and blot until the staining material is no longer transferred to the absorbent material.

The final step is: blot any remaining moisture or cleaning solutions by pressing or padding the area with an absorbent towel; weight it down and allow at least six hours to dry.

Note: Some stains require special professional care. If the stain is not removed by a prescribed household method, consult a professional IICRC cleaner or restorer.

1. Use our Spotter Bottle, or mix one teaspoonful of **white neutral detergent** (a mild liquid dishwashing detergent containing no strong alkalis or bleaches) with a cup of lukewarm water.
2. Apply a small amount of **dry cleaning solvent** (rubbing alcohol). Use a small amount on a towel to prevent any possible damage to sizing, backings, or stuffing materials. Do not use gasoline, lighter fluid or other flammables.
3. Mix one tablespoon of **household ammonia** with a half cup of water.
4. Mix one-third cup of white **household vinegar** with two-thirds cup of water.
5. Mix a solution of **powdered enzyme laundry detergent** following label or box directions. Allow the solution to remain on the stain for the length of time recommended by the manufacturer.

NOTE: Never mix ammonia and bleach during any cleaning operation and never use bleach.
